ART UNIT

PAPER NUMBER

1761

MAIL DATE

DELIVERY MODE

08/23/2007

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/500,735	Applicant(s) KAWA ET AL.	
	Examiner Vera Stulii	Art Unit 1761	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on May 29, 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on February 12, 2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on Application Number 10/038269 has been reviewed and is NOT accepted.

The application/patent being disclaimed has been improperly identified since the filing date used to identify the Application Number 10/038269 being disclaimed is incorrect. The correct filing date is October 19, 2001.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3, 5-12, and 14-16 of copending Application No. 10/038269 in view of Yoko et al. (US 6,482,456).

References and the rejection are incorporated as cited in the previous Office Action.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-6 and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over New York Times in view of Amerine et al (Table Wines).

Reference winebusiness.com and media-akita.or.jp are cited as evidence as discussed below.

In regard to claims 1 and 17, New York Times (p.3) discloses contacting a quantity of sake (rice wine) with a quantity of finely divided fresh produce (peaches cut in half and then thinly sliced) (p.3) to form a produce sake mixture, aging the produce sake mixture at a reduced temperature for a predetermined time ("refrigerate 24 hours") (p.3), separating the aged produce sake mixture into a raw flavored sake and insoluble material ("strain sake through cheesecloth into clean decanter") (p.3). New York Times discloses serving infused sake immediately or refrigerate infused sake in a sealed bottle for up to 5 days.

In regard to claims 2 and 17, New York Times (p.3) discloses aging the produce sake mixture under refrigeration conditions. Claim 2 recites specific range of

Art Unit: 1761

temperatures (between 33° F and 50° F). It was well known in the art that refrigerator temperatures (35° F-38° F preferred) are in the range recited in claim 2.

In regard to claims 4 and 19, New York Times discloses using fruit for flavoring sake (p.3)

New York Times does not disclose pasteurization of sake, and addition of a preservative to sake.

In regard to claims 1 and 17, Amerine et al disclose that pasteurization of wines controls bacterial diseases or prevents spoilage of sound wines under unfavorable conditions and promotes stability (pp. 212, 563). Amerine et al disclose that "[p]asteurizing as a means of preserving wines particularly susceptible to bacteria diseases or to fermentation by yeast may be accomplished by several ways" (p.563). In regard to claim 3, Amerine et al disclose flash-pasteurization (p.563) and tunnel pasteurization (pp. 212-213). In regard to claim 17, Amerine et al also discloses hot-fill pasteurization as a method of microorganisms destruction in wines (pp. 567, 792-793). Amerine et al also discloses that it is necessary to raise all points (in the bottle) to the required temperature and hold it for the necessary period of time (p.793). In regard to claims 1 and 17, Amerine et al also disclose the use of sulfur dioxide as an antimicrobial, antiseptic and preservative agent that prevents undesirable changes in color and flavor (pp.380, 396). In regard to claim 5, Amerine et al also discloses that sulfur dioxide prevents "microbial spoilage and protects wines against excessive oxidation during storage and aging" when used in minimal quantities (p.380). In regard to claims 6 and 20, Amerine et al also discloses sorbic acids and sorbates as antiseptic

Art Unit: 1761

agents (p. 408). Amerine et al. disclose use of potassium sorbate (p. 409). Amerine et al. also disclose partially replacing sulfur dioxide with ascorbic acid (p.416). Amerine et al. also discloses that "the antioxidative properties of sulfur dioxide have been replaced or supplemented by ascorbic acid. These replacements sometimes proved beneficial, particularly when the effectiveness of the mixture was increased by synergistic action" (p.416).

Since New York Times discloses serving infused sake immediately or refrigerate infused sake in a sealed bottle for up to 5 days, it is clear that in this case pasteurization and addition of preservatives is not necessary. However, if the further storage of infused rice wine is desired, one of ordinary skill in the art would have been motivated to employ traditional steps of wine preservation such as pasteurization and addition of preservatives as disclosed by Amerine et al. One of ordinary skill in the art would have been motivated to employ traditional steps of *wine* preservation because sake is a *rice wine* product. Since introduction of raw fresh fruit into sake would lead to yeast and bacterial contamination, one of ordinary skill in the art would have been motivated to employ pasteurization as a way of preserving wines particularly susceptible to bacteria diseases or to fermentation by yeast as taught by Amerine et al. One of ordinary skill in the art would have been motivated to use either tunnel or flash pasteurization, since both methods are well established in the art specifically for wine pasteurization as taught by Amerine et al. Further as evidenced by winebusiness.com, "[a] non-chemical alternative upon which dairies and sake makers **have long relied** is flash pasteurization" (p.5). Thus, flash pasteurization was well known in the art of sake

Art Unit: 1761

making. One would also have been motivated to use flash-pasteurization as a wine pasteurization method as taught by Amerine et al which is specifically used for sake preservation as evidenced by winebusiness.com. One of ordinary skill in the art would have been motivated to further subject rice wine to a hot-fill pasteurization as disclosed by Amerine et al. One of ordinary skill in the art would have been motivated to do so in order to prevent growth of microorganism in a bottle. One of ordinary skill in the art would have been motivated to do so, since hot-filing of wines was a well established fact in the art. As evidenced by media-akita.or.jp (p.2), sake is pasteurized at 65° C “to kill enzymes and yeast”, which is in the range recited by applicant. One of ordinary skill in the art would have been motivated to employ pasteurization temperature as disclosed by media-akita.or.jp to “kill enzymes and yeast” One of ordinary skill in the art would have been motivated to further add preservatives to the rice wine/sake, since both steps of pasteurization and adding preservatives are traditional and necessary steps in production of wines as taught by Amerine et al. One of ordinary skill in the art would have been motivated to add preservatives to the infused rice wine/sake such as sulfur dioxide in order to prevent microbial spoilage and to protect wines against excessive oxidation during storage and aging as taught by Amerine et al. One of ordinary skill in the art would have been motivated to further include a preservative such as ascorbic acid or potassium sorbate in order to control the quantity of sulfur dioxide and to supplement antioxidative properties of sulfur dioxide as taught by Amerine et al.

Claims 7-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over New York Times in view of Amerine et al (Table Wines) and Nagao et al. (JP 07-059553). Reference winebusiness.com is cited as evidence as discussed above.

New York Times and Amerine et al are taken as cited above.

New York Times and Amerine et al do not disclose using whole fruit concentrate.

Nagao et al. (JP 07-059553) discloses contacting a quantity of sake with a quantity of whole produce concentrate (fruit juice), blending the whole produce concentrate and the sake to form a produce sake mixture, and subjecting the produce sake mixture to a rapid pasteurization process (Abstract).

In summary, both New York Times and Amerine et al teach production of fruit-flavored sake (rice wine). Both Amerine et al and Nagao et al disclose pasteurization of wine. Since New York Times discloses infusion of sake/rice wine using fresh raw fruits such as peaches, cantaloupe, raspberries, pineapple, and strawberry, and Nagao et al discloses producing fruit flavor alcoholic beverage by contacting sake with fruit juice, one of ordinary skill in the art would have been motivated to modify combined teachings of New York Times and Amerine et al, and to substitute thinly sliced fruits with fruit juice in order to produce fruit flavored sake in cases when fresh fruits are not readily available. One of ordinary skill in the art would have been motivated to further add preservatives such as sulfur dioxide and ascorbic acid to the infused sake and to use flash pasteurization method for the reasons stated above.

Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vera Stulii whose telephone number is (571) 272-3221. The examiner can normally be reached on 7:00 am-3:30 pm, Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Keith Hendricks can be reached on (571) 272-1401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
